1   2. (Currently amended) The hosting service system according to claim 1, further

2   comprising:

3   an information processing module ⊟⊟ for analyzing said household

4   account information and providing additional information based on the analysis

5   results.

1   3. (Original) The hosting service system according to claim 2, wherein said

2   information processing module is provided by an information processing company

3   that is connected to said service provider over a network.

1   4. (Original) The hosting service system according to claim 1, wherein the

2   household account information provided by said service provider has its contents

3   of a plurality of items updated on the basis of a change of contents in bank

4   account information of each user.

1   5. (Original) The hosting service system according to claim 1, wherein said

2   service provider provides household account information, wherein income and

3   expenditure items are subdivided on the basis of a request from said user terminal,

4   and sends a predetermined notice to said user terminal on the basis of set

5   notification conditions from said user terminal.

1   6. (Original) A household account server for providing household account

2   information to a user terminal connected to a network, comprising:

3   an account information updating feature for updating account information

4   in response to update of bank account data and reflecting in the household account

5   information;

6   an information adding feature for adding information to the household

7   account information in response to additional information about marketing; and

8   a notification feature for notifying the account information updated by said

9   account information updating feature and the information added by said

10 information adding feature to said user terminal.

1   7. (Original) The household account server according to claim 6, further

2   comprising:

3   an information processing module for analyzing said household account

4   information and generating additional information about an advertisement,

5   wherein said. information adding feature adds the information generated by said

6   information processing module to said household account information.

1   8. (Original) The household account server according to claim 6, wherein said

2   information adding feature adds information about an advertisement that is

3   created by an external institute connected via network as analysis results of said

4   household account information to said household account information.

1   9. (Currently amended) An account information providing server for providing

2   managed household account information to a user terminal connected to a

3   network, comprising:

4   view request accepting means for accepting a view request from said user

5   terminal;

6   notification conditions accepting means for accepting the setting of

7   notification conditions from said user terminal; and

8   account information providing means for providing the household account

9   information to said user terminal on the basis of the view request accepted by said

10   notification conditions accepting means and for providing the household account

11   information to said user terminal if it matches the notification conditions accepted

12   by said notification conditions accepting means.

1   10. (Currently amended) The account information providing server according to

2   claim 9, further comprising:

3   adding means for adding advertisement information to the household

4   account information as a result of an analysis of said account information, wherein

5   said account information providing means provides the household account

6   information added with said advertisement information to said user terminal.

1   11. (Original) A household account information processing server, comprising:

2   acquiring means for acquiring household account information from a

3   server that holds household account information;

4   analyzing means for analyzing said acquired household account

5   information;

6   determining means for determining additional information to be added to

7   said household account information on the basis of analysis results by said

8   analyzing means; and

9   output means for outputting said additional information determined by

10   said determining means to said server.

1   12. (Original) A method for providing household account information to a user

2   terminal connected to a network using the network, comprising the steps of:

3   generating household account information on the basis of bank account

4   information of each user;

5   adding additional information to items held by said household account

6   information, wherein the. additional information is based on an analysis of said

7   generated household account information; and

8   providing said household account information with the items of said

9   additional information added to said user terminal.

1   13. (Original) The method according to claim 12, wherein the step of generating

2   household account information further comprising the step of:

3   subdividing income and expenditure items from said bank account

4   information to generate household account information; and

5   providing said generated household account information to said user

6   terminal on the basis of a view request from said user terminal.

1   14. (Original) The method according to claim 12, further comprising the steps of:

2   accepting notification conditions set by said user terminal; and

3   sending a notice to said user terminal if said household account

4 information matches said accepted notification conditions.

1   15. (Original) The method according to claim 12, further comprising the steps of:

2   providing said household account information to a information processing

3 company connected over a network;

4   receiving advertisement information generated by said information

5 processing company on the basis of an analysis of said household account

6 information; and

7   adding said received additional information to items held by said

8 household account information.

1   16. (Original) The method according to claim 12, further comprising the steps of:

2   acquiring information from other financial institutions over a network; and

3   generating household account information on the basis of said acquired

4 information.
